

Dear Comissioners:

BPL is absolute nonsense in the technical sense. Anyone with technical comptence in radio communications withour a commerce agenda will tell you without qualification that BPL will cause interference from DC to perhaps 80MHz. That includes the Broadcast Band service, already deminished by local noise, the shortwave and HF amaterur bands, international broadcasts, but most importantly: emergency, military and civil services employed in HOMELAND SECURITY. It is time the FCC get back to regulation of good engineering practices vice a champion of the chambers of commerces. BPL is an embarrassment to the heretofor technical competance of the Comission, its filed engineers, and to good public order. BPL will bring shame to the Comission, and it will take years for the Comission to regain credability. Sad, indeed.

Considered keenly, yours,

Jim Wylder
